Raj Kumar Kuncham

CAREER SUMMARY

- Dynamic professional with 6+ Years of Rich experience on performing Builds and deployments for Java applications.
- My main responsibilities involve Monitoring Regular Build and Deployment Activities on several environments like Dev/Test/UAT/Production environments.
- Administration of Gitlab/GitHub, J**ENKINS**.
- Implementation of Continuous Integration and Continuous Delivery best practices (CICD (Continuous Integration and Continuous Delivery)).
- Writing CICD pipelines i.e., Scripted and Declarative pipelines.
- Writing triggers and hooks for GIT.
- Defining branching/merging strategies for new projects in GIT.
- Experience in GIT Merge Conflicts resolution.
- Work on Access related tasks with GIT Repositories to whole Development team.
- Having good experience in managing Docker Containers (Docker) and Docker files.
- Having Good Experience with **Docker** like Installation of Docker, **Docker-Compose** and Maintaining Docker Registry Images, Creating Containers, providing networks, services and providing Storage volumes etc.
- Managing Kubernetes cluster and API resources.
- Good Experience on **Kubernetes orchestration tool**, like setting up Kubernetes Cluster on premises and in Cloud Environment i.e., Minikube, Kubeadm clusters and creation of Kubernetes deployments and managing them, providing network to pods and providing storage volumes, managing secrets and config maps, exposing of services, Replication controllers, Replica sets and Deployment API Resources.
- Working Experience on **AWS Cloud Environmen**t- creating EC2 Instances, connecting using Mobaxterm or Putty tool, Creating S3 Buckets and EBS, Creating VPC and Subnets, Creating AWS Registry Service, Creating IAM user roles, Creating Load balancers, EKS Cluster Creation, ECR services, HPA scaling PODs, YAML files Creations, Helm charts, Cloud trail etc.
- Working Experience on **AKS Cloud Environment**- Creating VMs (Virtual Machine), connecting using Mobaxterm or Putty tool or Azure cli, AKS cluster Creation, AKS Containerization, Azure Container Registry, HPA etc.
- Experience on WSO2 API management, creating APIs, Deploy and publish APIs, Api gateways, connectivity between WSO2 and Kubernetes applications etc.
- Working experience on **GITHUB ACTIONS CICD**
- Experience on ArgoCD Gitops CD for Kubernetes, helm charts and App of App concepts, Application management via CLI, Declarative, UI (User Interface) methods for Argocd deployment into Kubernetes.
- My activities also involve scripting in Shell/Bash to make improvements through automated scripts in the existing systems as and when required.
- Worked on Web/Application Servers like HTTPD, NGINX and Tomcat, as their backend request handler servers and need to work on that if those are down or has some memory related issues or space problems.
- Extensive use of ANT and Maven build or project management tool. Extensively using XML files for compilations of Java files and Artifacts creations and distribution preparations.
- Good Experience on Configuration Management Tool like Ansible – setting up ansible controller, writing playbooks, maintaining Inventory Files, **YAML** Scripting, Ansible roles, Ansible Vault etc.
- Work Experience in setting up SonarQube to scan the application code and get the Reports.
- Setting up Maven Remote Repository using Apache Archiva or Jfrog Artifactory and managing the project artifacts and dependencies like jar, war etc.
- Good Knowledge of ITIL Processes like Incident Management, Problem Management and Change management etc.
- Troubleshoot production and stage issues and coordinate with the development team to streamline code deployment.
- Providing support to DEV/QA, PPM and CS teams located in different continents on various Build and SCM issues.

- Well understanding of Cloud computing types Iaas, Paas and Saas.
- Good conceptual understanding of the building blocks of modern web-based infrastructure: DNS, TCP/IP, Networking, Firewalls, Load balancing, clusters, HTTP, SSL/TLS.
- Having full Knowledge on Agile Development process, Devops Process and SDLC (Software Development Life Cycle).
- Infrastructure Health Checkup/Monitoring.
- Experience on Code Scanner and Code Quality Analyzer tool such as **SonarQube**
- Experience on monitoring tools Elasticsearch, Logstash and Kibana, flebeat

TECHNICAL SKILLS

Operating Systems	Windows, Linux (Oracle, Ubuntu, RedHat)
Application Server	Apache Tomcat, JBoss, Nginx
Version Control Tool	GIT, GitHub, GitLab
Continuous Integration Tool	Jenkins, GitHub Actions, AWS Code Build &Code pipeline.
Monitoring Tools	Elasticsearch, Logstash and Kibana, filebeat, ArgoCD
Cloud Environment	AWS, Azure
DevOps Tools	Jenkins, GIT, Gitlab, GitHub Docker, Kubernetes, Istio, NGINX Ingress, Kong Ingress, ArgoCD Ansible, Azure, GitHub actions, Azure K8S, AWS EKS, AWS Cloud, WSO2 API Management tools, ANT, MAVEN, Angular deployments, Linux, Windows Server 2016, Ticketing Tool JIRA, ELK, Kibana, Logstash HTTPD, Tomcat Application Server, JBoss, Postman Archiva, Jfrog Artifactory, Harbor, Docker Hub, SonarQube Other tools: MobaXTerm, Tortoise GIT, GIT Bash, Putty, MT Putty, Win SCP.
Database	MySQL, Oracle DB, PostgreSQL

PROJECT SUMMARY

Project Name	Integration Platform Migration and Development (Equitas Bank)
Environment	On prem CICD with Jenkins and WSO2 API Management
Duration	Oct-2021 to Jan-2023
Role	Senior DevOps Engineer
Responsibilities	• Installation SonarQube for code quality check and Nexus repository and integrated them into Jenkins to achieve Continuous Integration. • Installation Jenkins Maven, Git, Jfrog Artifactory for maven dependencies and Creating Kubernetes cluster, Istio etc. (on prem) • Installation WSO2 Api Manager and Gateways and Configuration • Administration on Jenkins Kubernetes cluster, WSO2 API Manager and Gateway, Logs monitoring servers • Installation of all required tools on the environment and Setup CICD and Automate the workflow. • Creating Projects and applications in Gitlab • Creating Jobs in Jenkins and build the code with Maven • Writing Docker files and creating Images for Java spring boot applications • Installing docker repositories and publishing the docker images to repositories • Deploy the docker images into Kubernetes and monitoring the applications working • Istio ingress install and setup to expose the applications • WSO2 environment setup with distributed deployment and configure the SSL certificates • Rest and soup APIs creation, deploy and publish on WSO2 API manager • Installing ELK, Logstash, Kibana and monitoring the Application logs

Project Name	Arch Insurance
Client Name	US
Duration	Jan 2023– March 2023
Role	Senior DevOps Engineer
Responsibilities	• Containerizing and Migrating the Jboss Application into AKS Cloud • Continues Integration setup and Continues Deployment into AKS Cluster • Containerizing the Angular UI Application with Nginx image and deploy into AKS • Containerizing the java applications with maven Jib plugin and deploy into AKS • Monitoring the Application on ArgoCD and Continues deployment to AKS • Exposing the Application via Kong Ingress • Documentation of the overall containerization
